

00 — SUMMARY

Applied-AI operator embedded in an enterprise customer-facing team for 8 years at GLG, a PE-backed global expert network. The AI person on a non-AI team: deployed LLM-assisted workflows across my own team under personal license, drove their adoption, and contributed to the internal and client-facing AI enablement strategy conversations as that work scaled. Owns the full engagement lifecycle for a \$14M+ portfolio across Deloitte, Accenture, Gartner, KPMG, AlixPartners, Kearney, and Roland Berger, translating ambiguous enterprise needs into structured workflows and feeding field insight back into how the organization operates. Builds the analytical and technical layer hands-on: Python, SQL, dbt, and the Anthropic API across self-shipped projects, with Google Advanced Data Analytics certification and the full Anthropic AI Fluency credential set. Looking for an Applied AI, AI Enablement, or AI Workflow role at a remote-first, async, output-judged company.

01 — CORE COMPETENCIES

AI ENABLEMENT	LLM Workflow Design & Deployment · Team-Level AI Adoption · Prompt Engineering · AI Tool Evaluation · Internal & Client-Facing AI Strategy Input · Human-in-the-Loop Process Design · AI Fluency Enablement
BUILD	Python (pandas · scikit-learn) · Vanilla JavaScript · Anthropic API · Cloudflare Workers · Google Apps Script · SQL / BigQuery · dbt Cloud · REST API Integration · Structured JSON / Schema Design
DELIVERY	Full-Lifecycle Engagement Management · Multi-Stakeholder Orchestration · Workflow & SOP Design · Health Scoring Systems · Adoption & Usage Tracking · Agile / Scrum (PSM I) · Cross-Functional Coordination
DATA	EDA · Regression & Classification Modeling · Cohort & Segment Analysis · Behavioral Pattern Detection · Data Modeling · Looker Studio · Tableau
STACK	Anthropic API · Claude · ChatGPT · Gemini · Snowflake · BigQuery · Databricks · dbt Cloud · GitHub · Salesforce · GA4

02 — PROFESSIONAL EXPERIENCE

GLG

AUSTIN, TX · REMOTE · JUL 2018 — PRESENT

Senior Manager, Service

OCT 2023 — PRESENT

- Deployed AI-assisted workflows using Claude, ChatGPT, Gemini, and in-house LLM tools to accelerate account analysis, QBR prep, escalation drafting, and data synthesis, building the workflows independently under personal license and driving their adoption across my team, leading 3–10 client-facing managers per quarter on the workflows I wrote.
- Contributed to internal and client-facing AI enablement strategy as GLG scaled its home-grown AI tooling, bringing the embedded practitioner perspective into cross-team discussions on where LLM workflows fit, what to standardize, and how to operationalize them safely for non-technical users.
- Own end-to-end engagement and delivery for a 14M+ enterprise portfolio, managing rollout, enablement, health monitoring, and expansion across Deloitte, Accenture, Gartner, KPMG, AlixPartners, Kearney, and Roland Berger from a single accountable position.
- Translate ambiguous enterprise needs into structured workflows: scope deliverables with internal product and operations teams, define success criteria, set timelines, and ensure execution at scale across concurrent engagements.
- Built custom Salesforce health-scoring dashboards and automated reporting that surfaced account risk early, gave leadership a live view of portfolio health, and reduced reactive escalations.
- Drove 5% YoY portfolio growth by mapping new use cases and operational gaps through structured discovery, and led enablement sessions for stakeholder layers from end users to senior executives.

Manager, Client Solutions — Team Lead

MAR 2022 — OCT 2023

- Founded and scaled an internal Center of Excellence from scratch: built lifecycle playbooks, onboarding templates, and Agile-driven delivery cadences adopted org-wide, reducing ramp time and standardizing quality.
- Managed a team of client solutions specialists while carrying a personal enterprise book, bridging IC delivery and people management through a high-growth phase.
- Built renewal forecasting models and pipeline tracking in Salesforce that improved quarterly accuracy and surfaced at-risk accounts earlier.

- Grew from IC to senior managing complex enterprise accounts across consulting, financial services, and technology, promoted twice in four years.
- Built custom Salesforce reporting infrastructure for account-health visibility that became the team standard.

03 – APPLIED AI & ANALYTICS PROJECTS

Brain Dump – AI Agent for Executive-Function Support

Anthropic API · Cloudflare Workers · Structured JSON · Vanilla JS · samievargas.com/brain-dump

- Built and shipped an AI agent that turns unstructured brain dumps into structured, energy-state-aware task plans, architected around a Cloudflare proxy to the Anthropic API with structured JSON output and energy-state branching logic. Put in front of early users, whose feedback drove a single-step simplification to the capture flow.

Signal – Account Intelligence for CS Professionals

Anthropic API · Multi-Call LLM Architecture · Source-Weighted Prompts · samievargas.com/signal

- Designed a multi-call LLM workflow that reads messy account files for second-order sentiment and surfaces revenue risk, relationship health, and pre-call briefs through source-weighted prompts and an analysis-focus toggle. Cut account prep from about an hour to one minute, the hour of digging I spent eight years doing by hand. Validated with early users, including a senior CS leader, and refined to a single-step entry flow from their feedback.

Instacart dbt + ML – When Does Data Become Trustworthy?

dbt Cloud · BigQuery · SQL · scikit-learn · github.com/SamieVargas/instacart-project

- Built a staging → mart dbt pipeline across 3.4M orders with 35 passing tests; found a 0.60 reorder ratio hides a 3x segment gap (0.221 new vs 0.670 veteran users), validated with random forest (AUC 0.989 vs 0.857).

samievargas.com – The Site and Its Arcade

Vanilla ES Modules · CSS Custom Properties · Cloudflare Workers · GitHub Pages · No framework, no build step · samievargas.com

- Built and shipped the portfolio site with no framework and no build step, so everything is readable and nothing is compiled. The two AI agents sit behind a Cloudflare Worker so the key stays server-side. Includes live-built SVG data visualizations, a public design-system page with a component sandbox and a change log fed by the GitHub commits API, and an arcade of fifteen self-contained browser apps, six of which pull live public data from keyless APIs (Wikidata SPARQL, Open Library, City of Austin).

Life in Pixels RAG + Life OS – Personal Data Tools

Python · RAG · Google Apps Script · github.com/SamieVargas/pixels-rag

- A retrieval-augmented pipeline over six months of my own daily behavioral data, askable in plain language; it surfaced that hot yoga plus walking beat everything else for sleep and recovery. Alongside it, Life OS, a daily dashboard in Apps Script pulling from two of my own data endpoints into fifteen charts across health, habits, and behavior.

ATX Foodie – Public Health Compliance Analysis

Python · Socrata API · folium · kaggle.com/code/samievargas/atx-foodie-inspection

- Pulled 21,160 City of Austin inspection records via API; built a brand compliance scorecard and folium choropleth, finding follow-up inspections score 8 points below routine visits, evidence of a broken corrective loop.
